

Potential attendees

The International Summer School on Radar/SAR is intended for students, PhD students and young research scientists dealing with radar related issues. Industrial research engineers and developers will also benefit a lot from this week, where they can learn more about the most advanced technologies and signal processing in radar. This school is officially recognized as a continuing education program.

Our participating partners are looking forward to intense discussions during the courses of the summer school. In addition there is a chance to contact the experts for further graduate work and to establish your career entry in a promising field of technology.

Moreover there will be enough time for off-line contacts which will allow the participants to network and consult with the leading international players in the field of radar/SAR.

The language of the International Summer School is English.

Prerequisites

- Basic knowledge in signal and image processing
- Excellent Bachelor degree holders can be selected, depending on quality of degree, educational background and study focus, but require additional qualifications which had been acquired in parallel by attending additional courses and passing the corresponding examination.

Registration

More information about the registration and the Summer School fee, which **includes** accommodation, full board during the Summer School, all lectures and workshops, printed lecture material and other common activities, you can find on the page
